# RG PNG: Google AI Studio Build Prompt

> Copy everything below the line into Google AI Studio (Build mode). Before you send it, attach the `RG-PNG-icons.zip` folders as assets (see section 12).

---

## 1. Role and goal

You are a senior front-end engineer and UI designer. Build a production-quality, mobile-first web app called **RG PNG**: a searchable library of ready-to-use PNG icons, app icons and design elements. Users search or browse packs, preview an asset, and download it as a transparent PNG in one tap. The goal is that a designer never has to hunt for logo and app-icon elements across the web.

Deliver a complete, working app, not a mockup. No placeholder text, no "TODO", no broken buttons.

## 2. Tech stack

- React 18 + TypeScript + Vite, with Tailwind CSS (or plain CSS variables if simpler).
- No backend. All data comes from a typed local `assets.ts` file plus static images in `/public/assets/<pack-id>/`.
- Icons for UI chrome: Tabler Icons (outline only) via `@tabler/icons-react`.
- No other UI libraries. Keep the bundle light.
- Must work well on a 360 to 430 px wide phone and also look good centered on desktop (max content width 520 px).

## 3. Brand

- Name: **RG PNG** (the "RG" in dark text, "PNG" in the accent gradient).
- Logo: a rounded-square glass tile (corner radius about 27%) with a diagonal gradient `#5b5bf0` → `#9a6bf2` → `#ff6fb1`, a soft white gloss on the top half, a thin white rim highlight, bold white "RG" (Poppins Bold) and a small frosted pill under it reading "PNG". Provide it as `public/logo.svg` and `public/logo.png` (1024 px), and use it as the favicon and header logo.
- Tone of voice: friendly, short, Hinglish microcopy (for example "Kya dhoondhna hai?", "save ho gaya", "Kuch nahi mila. Doosra keyword try karein.").

## 4. Visual design system: Liquid Glass (do not deviate)

### Design tokens

```
:root {
  --text: #0f1530;
  --text-soft: rgba(15, 21, 48, 0.62);
  --glass-bg: rgba(255, 255, 255, 0.26);
  --glass-border: rgba(255, 255, 255,
0.55);
  --accent: #5b5bf0;
  --accent-2: #ff6fb1;
}
```

- Font: Inter (fallback Segoe UI, system-ui). Weights 400, 500, 600, 700 only.
- **Background:** full-screen fixed layer with `linear-gradient(160deg, #e8ecff, #ffe9f5 55%, #e3f8ff)` plus three blurred, slowly floating blobs ( `#7c7cff` top-left 320 px, `#ff8fc4` right-middle 280 px, `#5fd6ff` bottom-left 300 px; `filter: blur(60px)` , opacity 0.85, 16 s ease-in-out infinite drift with staggered delays).
- **Glass surface ( `.glass` ):** `background: var(--glass-bg)` , `backdrop-filter: blur(22px) saturate(180%)` , 1 px `var(--glass-border)` , inner highlights `inset 0 1px 1px rgba(255,255,255,.9), inset 0 -1px 2px`

`rgba(255,255,255,.25)` and outer shadow `0 10px 30px rgba(60,70,140,.18)`, `overflow: hidden`.

- **Specular light:** every glass surface has a `::before` radial highlight (160 px, white 55% to transparent) that follows the pointer or finger via CSS variables `--mx` and `--my` set on `pointermove` and `touchmove`.
- **Primary buttons and active chips:** `linear-gradient(135deg, #5b5bf0, #ff6fb1)`, white text, soft indigo shadow, `scale(.95)` on press.
- Radii: cards 22 to 28 px, pills 999 px, bottom sheet 32 px top corners.
- Respect `prefers-reduced-motion` (disable blob and bobbing animations). Provide a fallback (`rgba(255,255,255,.75)` background) when `backdrop-filter` is unsupported.
- Do not restyle the supplied icon artwork. Show it as-is with `object-fit: contain` and a light drop shadow.

## 5. Screens and components

Single-page app with a floating glass bottom navigation. Build these:

### 5.1 Home (default)

1. **Header:** logo (52 px) + wordmark "RG PNG" + subtitle "Kya dhoondhna hai?"; a round glass notification button on the right.
2. **Search bar:** glass pill with a search icon, an input (placeholder "Icons, PNG, stickers, shapes..."), and a gradient round filter button. Live filtering on input; Enter scrolls to results.
3. **Pack chips:** horizontally scrollable pills: All, Frosted, Clay, Security, Red gloss, Pedestal. Exactly one active. Hide the scrollbar.
4. **Hero card (glass):** tag "New pack", title "RG PNG Starter Kit", text "{N} edit-ready PNG, 5 packs, ek hi jagah.", CTA "Pack kholo" (shows all assets and scrolls to the grid), and a tilted floating security-shield icon on the right with a gentle bobbing animation.
5. **Trending packs:** horizontal carousel of glass cards (150 px wide): a 3-icon preview strip, pack title, "{count} PNG". Tapping a pack filters the grid to that pack and scrolls to it. A "Sab dekho" link resets to All.
6. **Popular assets grid:** 3 columns, square glass cards, each with the PNG, name caption (ellipsis), and a heart button (top-right). Heading shows "Popular assets", or `Results for "query"`, or "Saved assets"; count on the right ("122 PNG"). Empty state text when nothing matches.

**5.2 Asset detail (bottom sheet, glass)**

- Opens on card tap with a slide-up animation and a dimmed scrim; closes on scrim tap or Esc; has a grab handle.
- Large preview on a subtle checkerboard (to show transparency), asset name, meta line "{Pack} - PNG - {w} x {h} px".
- Primary button **Download PNG** (downloads the file as `RG-PNG_<Pack>_<Name>.png`) and a round heart button to save or unsave.

**5.3 Bottom navigation (floating glass pill, 5 items)** Home, Search (focuses input), Packs (scrolls to packs), Saved (filters to saved items; toast "Abhi kuch save nahi hai" if empty), Profile (toast "Profile screen jaldi aayegi"). Active tab has a lighter inner pill and accent color.

**5.4 Toast:** glass pill above the nav, auto-hides after 1.8 s, `aria-live="polite"`.

## 6. Data model

```
type PackId = 'frosted' | 'clay' |
'security' | 'redgloss' | 'redpedestal';

interface Asset {
  id: string;        // e.g. "clay_07"
  pack: PackId;
```

```
  name: string;      // searchable title,
e.g. "Folder"
  file: string;      //
"/assets/clay/clay_07.png"
  width: number;
  height: number;
  tags?: string[];   // extra search
keywords
}

interface Pack { id: PackId; title: string;
short: string; count: number; }
```

Packs:

| id | Title | Chip label | Items |
|---|---|---|---|
| frosted | Frosted Glass Dark | Frosted | 20 |
| clay | Clay 3D | Clay | 35 |
| security | Cyber Security 3D | Security | 12 |
| redgloss | Red Gloss | Red gloss | 40 |
| redpedestal | Red Glass Pedestal | Pedestal | 15 |

Asset names, in file order (`<pack>_01.png`, `<pack>_02.png`, ...):

- **frosted:** Home, Bookmark, Globe, Add user, Settings, Trash, Share, Star, Image, Heart, Location, Info, Mail, Apps, Download, Edit, Call, Cart, Document, Bell
- **clay:** Document, Edit note, Invoice, Approved file, Checklist, Notepad, Folder, Clock, Lock, Hierarchy, Tag, Sync, Layout, Cloud, Check, Open folder, Archive, Calendar, Search, Briefcase, Chat, Mail, Link, Image, Play, Globe, Bookmark, Microphone, Wifi, Pie chart, Heart, Star, Settings, Trash, Power
- **security:** Shield, Password lock, Malware laptop, Fingerprint phone, Web security, Locked folder, Warning, Protection hand, Email alert, Hacker, Padlock, Globe shield
- **redgloss:** Cloud, Chat, Video camera, Team, Folders, Fingerprint, Upload folder, Lock, Monitor, Upload box, Glass, Puzzle, Pie chart, Privacy lock, Key, Bubbles, Cloud upload, Presentation, Profile, Sync folder, Shield, Puzzle folder, Rocket, Location pin, Database, Server, Puzzle card, Bar chart, Add user, Storage, Add storage, Video play, Cast screen, Eye, Info, Server rack, Headset, Layers, Eye open, Padlock
- **redpedestal:** AI document, Approved chats, Analytics, AI chat, Messages, Secure shield, Gear,

Settings, Tools, Users, Verified user, Database, Chat tasks, Document, Checklist

Generate `assets.ts` from these lists. Read `width` and `height` from the actual image files if possible, otherwise use `naturalWidth` and `naturalHeight` at runtime.

## 7. Behaviour and logic

- **Search:** case-insensitive substring match on `name`, pack title and `tags`; combined with the active pack filter and the Saved-only filter.
- **Saved items:** stored in `localStorage` (`rgpng_saved`), restored on load, toggled from both the grid heart and the sheet heart; toast "{name} save ho gaya" / "{name} hata diya".
- **Download:** fetch the file as a Blob and trigger an `<a download>` click so it works on mobile and desktop; toast "{name} download ho raha hai".
- **Performance:** `loading="lazy"` and `decoding="async"` on grid images; explicit aspect ratios to prevent layout shift.
- **Deep state:** optional but nice: reflect the active pack and query in the URL hash.

## 8. Accessibility and quality bar

- Semantic landmarks (`header`, `main`, `nav`), real `<button>` elements, visible focus rings (3 px accent at 35% opacity), `aria-label` on icon-only buttons, descriptive `alt` text, the sheet as `role="dialog" aria-modal="true"` with focus trapping and focus return.
- Text contrast of at least 4.5:1 on glass surfaces; touch targets at least 44 px.
- No console errors or warnings. Responsive from 320 px upward. Works offline once loaded.

## 9. Suggested file structure

```
src/
  main.tsx
  App.tsx
  styles/globals.css        // tokens,
glass, background, animations
  data/assets.ts            // packs +
assets
  hooks/useSaved.ts         //
localStorage-backed saved set
  hooks/useGlassLight.ts    // pointer-
follow specular highlight
  components/
    Background.tsx  Header.tsx
SearchBar.tsx  PackChips.tsx
    HeroCard.tsx    PackCarousel.tsx
AssetGrid.tsx  AssetCard.tsx
    AssetSheet.tsx  BottomNav.tsx
```

```
Toast.tsx
public/
  logo.svg  logo.png
  assets/<pack-id>/<pack-id>_NN.png
```

## 10. Out of scope for this version

Accounts, payments, a real backend, and the Quick Edit tool (crop, recolor, resize). Leave clean extension points (for example an `onEdit(asset)` stub that is not shown in the UI) so Quick Edit can be added next.

## 11. Acceptance checklist

- [ ] Home matches the liquid-glass design: animated blobs, glass cards, moving specular light.
- [ ] All 122 PNGs render in the grid with correct names; transparent backgrounds look right.
- [ ] Pack chips, pack cards, hero CTA and "Sab dekho" all filter correctly.
- [ ] Search filters live and shows the empty state.
- [ ] The asset sheet opens, closes (scrim and Esc), downloads a valid transparent PNG with the correct filename.
- [ ] Saved items persist after a reload and appear in the Saved tab.

- [ ] Bottom nav, toast, keyboard navigation and reduced-motion all work.
- [ ] Lighthouse accessibility score of 95 or more on mobile.

## 12. Assets to attach (done by me before sending this prompt)

I will upload the folder structure from `RG-PNG-icons.zip`: `Frosted-Glass-Dark/`, `Clay-3D/`, `Cyber-Security-3D/`, `Red-Gloss/`, `Red-Glass-Pedestal/` (files named `<pack-id>_NN.png`) and `RG-PNG-logo.png` / `.svg`. Map them to `public/assets/frosted`, `clay`, `security`, `redgloss`, `redpedestal` and `public/logo.*`. If an asset file is missing, show a neutral glass placeholder tile instead of a broken image.

When finished, output the full project with run instructions (`npm install`, `npm run dev`) and a one-paragraph summary of any decisions you made.
